Our product Range

Hoses

Hose Fittings

Adapter

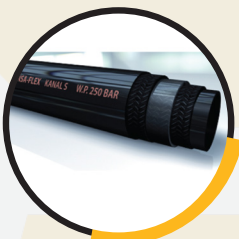

Flanges

Hydraulic Hose

Metal Hose

Industrial Hose

Air Conditioning
Hose

Hose Protection

— Metal Hose Types —

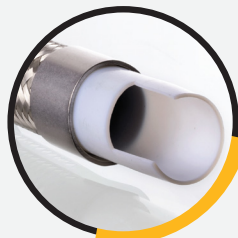

Expansion joints

Coolant Hose

Metal Hoses

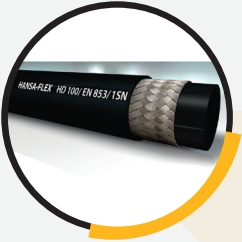

PTFE Tubing

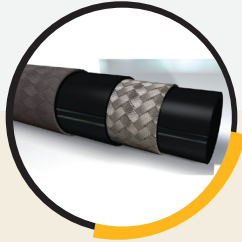

Wrapped Hoses

— Industrial Hose Types —

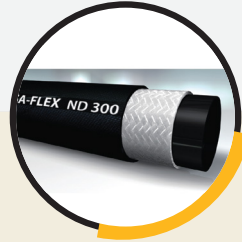

Chemical Hoses

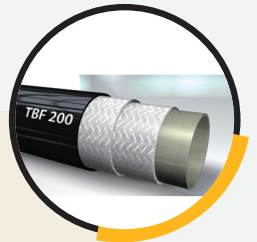

Steam Hoses

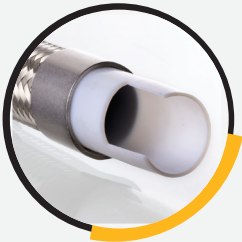

Food hoses

Air Hoses

Oil and Fuel
Hoses

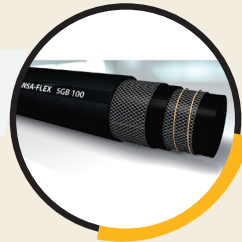

PTFE Hoses

Water Hoses

Gas Hoses

Abrasive Media
Hoses

— Metal Hose Production —

Stainless Steel Material

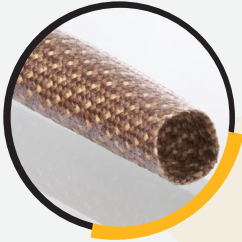

Leakage Test

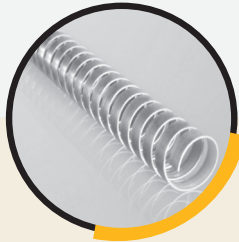

Welding Type

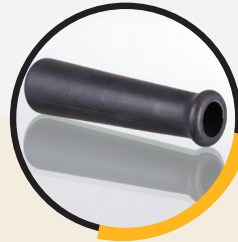

Hose Protection Types

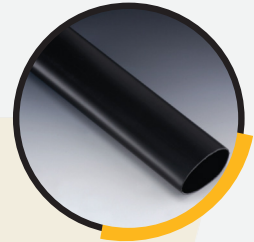

Heat Protection

Abrasion Protection

Kink Protection

Heat Shrink Tubing

Certifications and approvals

All processes are quality tested and certified

- . Quality management DIN ISO 9001
- . Environmental management DIN ISO 14001
- . Close cooperation with classification and certification bodies
- . Contributions to BGR 237 and the international working group ISO / T45
- . Cooperation partner in the IHA, International Hydraulics Academy

Hose Test Benches (P 160)

Hose lines that can not withstand the high pressure for which they are designed can cause serious damage, resulting in high costs - often higher than the price of a test bench.

Why take a risk that can be easily avoided?

By testing the quality of your products, you opt for safety. The P 160 workshop test bench allows for the efficient and safe final inspection and testing of hose lines. It is easy to operate and quickly become part of your routine procedures.

Hose Cleaning Machines

The mobile hose cleaning machine is perfectly suited for use in the service division.

EN 853 2SN DN 13 275bar 3Q14 (25)

Ultra Clean Machines

Highly productive hose cleaning machine. The machine is best suited for high volume manufacturing of 2" hoses along with workshop capability for 3" high pressure hose and 3" industrial hose.

Our service

As a full-service provider, we supply our customers with everything they need from a single source : From standard hose assemblies and tubes to power units , hydraulic components or metal hoses . We support our customers through every phase of their projects : From the engineering and prototyping to project planning, installation and commissioning . Partners in original equipment Original equipment manufacturers already benefit throughout the design and engineering phase : From rapid completion of product samples and prototypes all the way through to volume production, including the necessary documentation.

Upon request, we will set up consignment warehouses or deliver pre-assembled structural components just-in-time to the assembly line.

Engineering Technical Support

- . Our technical team are responsible to select the appropriate hoses according to your operating condition and your application.
- . Our technical team can make hoses identification that enable our customers to have their own technical data base.
- . Petromix technical team can make a troubleshooting for any hoses failure to avoid any kind of machine stoppage.
